

WATER TREATMENT

CHLORINE TABLETS

TABLETS FOR THE GROWTH CONTROL OF BACTERIA & ALGAE

DESCRIPTION

CHLORINE TABLETS are a specialized product in tablet form used for disinfecting water supplies, sewage, waste-water and pool facilities on board of ships.

When added in water supplies, they release active chlorine, for chlorination and for the control of bacterial growth.

APPLICATION

CHLORINE TABLETS are suitable for water purification, swimming pools, Jacuzzis facilities and also for water and sewage water systems. We recommend not to use **CHLORINE TABLETS** for potable water treatment.

USE AND DOSING

CHLORINE TABLETS are 200gr tablets that contain 90% active agent. When dissolved approximately 45% of active agent is released. The normal dosage is 1 tablet for 5m³ of treated water. After a couple of hours, test for Free chlorine. The optimum level is 4-2 mg/l, amount that can vary according to the state/flag. If this level has not been achieved, repeat the process.

PRODUCT PROPERTIES

Appearance:	Tablets	pH (undiluted):	Alkaline
Miscibility:	100% miscible in water	Flash Point:	None

- ✓ 100% waste soluble tablets
- ✓ Water disinfectant
- ✓ Acts against bacteria and microorganisms
- ✓ Use on water and sewage water systems
- ✓ Very cost effective
- ✓ Easy to apply

PROBLEMS SOLVED

- ✓ Water contamination
- ✓ Bacteria
- ✓ Microorganisms
- ✓ Algae

APPLICATION AREAS

- ✓ Water systems
- ✓ Waste water system
- ✓ Swimming pool
- ✓ Jacuzzis
